

Your digital partner

Innovative and trusted digital living solutions that enhance life

everonTM
Digital solutions for every care journey

There is an urgent need for housing and care providers to upgrade all their analogue grouped and dispersed systems due to the BT digital switchover. At some point during the run up to 2025, **traditional analogue systems will fail.**

Knowing where to go for help and advice is an issue as there is limited information and trusted sources available to help health, housing and social care providers make informed decisions about how to upgrade their stock.

Major challenges you face:

Clients at risk	The technology in existing systems is already failing, due to frail cable networks and old analogue technology, putting clients at risk.
Market awareness	Requirements and capabilities of a fully digital solution are ever changing, due to the UK market being in the early stages of embracing digital.
Monitoring centre compatibility limitations	Where a hybrid solution is installed, the onsite services will remain analogue and will continue to deliver reactive services rather than benefitting from the redesign of a care pathway enabling a proactive service.
Mixing digital with analogue	Only 4% of monitoring centres are capable of receiving digital alarm calls. Hybrid systems utilising digital communicators have emerged as a quick fix but this brings in another point of failure.
Fears about upgrade and maintenance costs	The cost to upgrade and the disruption to clients is of enormous concern to providers. Testing and maintenance of old systems is a national requirement but incredibly time consuming and expensive.

The solution:

Upmost quality, value for money and future proofed investment.

With cloud-based, secure data sharing, Everon's systems enable one holistic view and deliver proactive service models.

Leading digital provider.

As the **European market leader** in digital grouped living solutions, Everon has been providing digital solutions since 2007 in Finland and Sweden and introduced into the UK in 2019. This demonstrates we can provide solutions that are tried and tested across 70,000+ clients pa.

Everon uniquely invests 10% of its revenue in research and development annually.

Through significant investment in innovation over many years, our flexible, cable-free, open platform provides personalised, trusted and sustainable solutions that enhance life, in any care setting including care homes, assisted living or at home.

How does Everon help?

Integrated health, housing & care platform

The only open platform capable of delivering integrated health and social care service utilising artificial intelligence to enable our commissioners to deliver proactive services.

Maintenance free (hardware)

Our cost effective and flexible license fees cover data usage, access to platform and our 24/7 support service where we deliver remote fixes (these cover 95%+ of all fixes).

Speed and ease of installation

Due to no cabling, for a 30-way scheme it takes just one-two days to install (compared to the usual 7-10 days) with minimal disruption to the fabric of the property and clients eg running of cables, drilling, breaching of the compartmentalisation of the flats for fire protection.

Cellular/GSM alternative

Everon operates on Cellular/GSM networks, which are a recommended form of communication within emergency and security environments and fully aligned with industry guidance.

No cabling

Our systems are cable-free which reduces cost and complications.

Future proofed technology

We include all software upgrades free of charge which means that the latest upgrades, new features and innovations are automatically added.

Contact us today to find out about our bespoke digital advice service.

We have digital advisors in place today, to help you make decisions about your upgrade choices.
