

# The Everon Guide

To A Successful Digital Switchover

# Pushing the Boundaries for over 10 years

Due to the on-going Digital switchover there is a need for commissioners to engage with trusted partners who can deliver truly digital assistive technology. Proactive solutions that ensure all key stakeholders such as Health, Housing and Social Care are enabled to deliver a more holistic approach to personalised care.

Everon Group have been delivering such solutions for over ten Years. Our experience to date has allowed the development of a range of solutions that are driven digitally meeting the needs of our customers across Europe.

Everon Group has a range of digitally connected technologies and services that are core to the delivery of high quality, sustainable care and support the nations ambition to deliver healthier, longer, safer lives.

We are not talking about future developments - we have been deploying our systems within the UK for over seven years, and within Scandinavia for ten years. The digital model for assistive technology has been key to those countries delivery of person centred care. Our solutions have been used within several case studies and best practice cases from around Europe.

## Understanding the Current Barriers

We know that the on-going Digital upgrades brings significant barriers to the UK market and we have considered them in detail.

### Digital Expertise

Everon Group are keen to not just sell hardware. We will work in an advisory capacity with our Commissioners with a guarantee to deliver a fully digital approved solution.

### Finance Plans

We have a range of finance packages that will allow the upgrade of all commissioner's systems with a payment plan to accommodate current financial restrictions.

### Call Centre Compatibility

Utilising the SCAIP (Social Care Alarm Internet Protocol) we are compatible with all major call center's in the UK including Tunstall, Legrand and Verklazan.

### Intelligent Call Routing

Not all alerts require immediate responses - we enable the carer/ family network to support the resident.

## Our Clients:

- Saffron Housing
- Clarion Housing Group
- London Borough of Havering
- London Borough of Hillingdon
- London Borough of Hammersmith and Fulham
- London Borough of Lambeth
- City of Edinburgh
- Thurrock Council
- Hartford Care
- Jewish Care

### Old Wiring Networks

The cost to replace these wiring networks with Data Cabling is expensive and inconvenient to the customer. We do not use cable networks as the solution is wireless which means that the speech module can be installed in less than 10 minutes minimising resident impact.

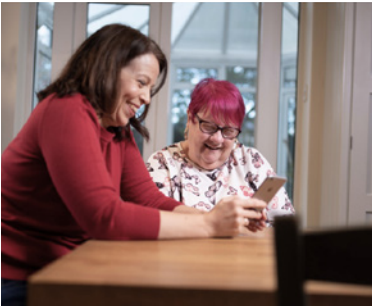

### Reactive or Proactive

Being told that somebody has fallen or has a Urinary Tract Infection after the event is too late and contributes negatively to the Health and Social Care stakeholder network. By raising an alert using Machine Learning and AI and providing an appropriate intervention can have a positive effect on the customers health and wellbeing as well as the associated resource used to respond to such emergencies.

“Learning and Innovation go hand in hand - the arrogance of success is to think that what you did yesterday will be sufficient for tomorrow.”

William Pollard  
English Clergyman 1828 - 1893

#### WEARABLE SENSORS

Waterproof, light, movement sensing, always there.

#### REPORTING & ANALYTICS

Remote Fault Reporting and Analytics. Real-time online reporting and analytics and insights.

#### ALARM HANDLING
